WISELIVING

SUSTAINABLE HEATING, COOKING & HOT WATER SYSTEMS

Crafted for modern living with a touch of tradition, the Christo wood heater delivers powerful heat and refined style in perfect balance.

CHRISTO
GRAND HEAT

AUSTRALIAN MADE, OWNED & OPERATED

CHRISTO GRAND HEAT

Crafted with performance, durability, and design in mind, the Christo delivers efficient wood-fired capability for both living spaces and hydronic systems. Proudly Australian-made, each unit combines traditional craftsmanship with modern engineering to provide powerful combustion heating, optional domestic hot water capabilities, and seamless integration with hydronic and solar systems. With the potential to heat up to 400 sqm, the Christo range offers a timeless solution built to suit Australian conditions and lifestyles, whether you're warming a single room or an entire home.

A MODERN CLASSIC IN WOOD HEATING: CHRISTO SINGLE-SIDED

The Christo Single-Sided wood heater combines powerful radiant performance with a sleek, space-conscious design. Its expansive ceramic glass window frames the flames beautifully, making it a natural focal point while delivering consistent warmth.

Built from fully welded, heavy-duty steel with a high-efficiency firebox, the Christo is designed for lasting durability and reliable performance. For those seeking authentic wood-fired comfort with modern style, the Christo Single-Sided is the perfect fit.

Single-Sided Christo with Single-Action Door

WARMTH THAT CONNECTS SPACES: CHRISTO DOUBLE-SIDED

The Christo Double-Sided is more than a wood heater – it's a statement of warmth, connection, and versatility. Its expansive double-sided design links two spaces with a shared fire, whether positioned between rooms, as a striking freestanding centrepiece, or even connecting to an alfresco deck.

Constructed from heavy duty, fully welded steel and featuring a high-efficiency firebox, the Christo Double-Sided combines long-lasting strength with large capacity heating capabilities.

Intuitive air controls on both sides ensure even burning throughout, and a removable ashtray makes cleaning simple while maintaining the benefits of an ash bed heating system.

Double-Sided Christo with Double-Action Door

FLEXIBLE BY DESIGN

The Christo is available as a striking freestanding unit, defined by clean architectural lines, or for a seamless look, both single, and double-sided models can be fitted with a minimalist surround, transforming them into inbuilt fireplaces. This allows installation within an existing fireplace, set into a feature wall, or – on double-sided models – positioned elegantly between two rooms.

For added flexibility, the Christo offers a choice of single-action or double-action doors. The single-action door opens horizontally on hinges, swinging out to 180°. The double-action door combines this movement with the ability to lift fully above the firebox using integrated counterweights, creating the warmth and atmosphere of a true open fireplace.

HEAT, HEART & HOME COOKING

Enhance your Christo with a detachable cooking crane, perfect for direct-fire cooking. Boil the kettle, simmer a stew, or cook a pizza right over the flames – all while heating your home. A practical and rustic addition for those who love the charm of wood-fired cooking.

DOMESTIC HOT WATER

Upgrade your Christo with a 5 kW or 8 kW integrated boiler to heat your home and hot water simultaneously – without compromising firebox capacity. The 8 kW option provides ample hot water for larger households and can also support a heated towel rail or small hydronic radiator.

HYDRONIC HEATING

For whole-home heating demands, the Christo can be equipped with a high-capacity water jacket – available in 20 kW and 30 kW options for single or double-sided units, or a powerful 45 kW option for the single-sided model. These high-output boilers are ideal for underfloor systems, radiators, convector units or domestic hot water storage, providing a dependable and renewable solution for off-grid or energy-conscious homes.

CHRISTO SPECIFICATIONS
